

# How to sort everything? from the very start according to market expectations?

Now, you can classify your grapes according to market expectations right from the very start of the season.

Thanks to proven scientific methods, you make a close monitoring of grape maturity and an extremely precise selection technique

#### Much more than an innovative sensor

An innovative measurement tool is linked to an expert system. More than just a simple analysis, this technique also provides high-quality data interpretation.

#### Expert appraisal of your analyses.

Dyostem integrates seamlessly with your classical methods for monitoring grapeberry ripening. The parameters measured by the sensor (berry colour and volume, uniformity) and other analyses (sugar acidities, etc.) are exported via your extranet. An expert system based on artificial intelligence automatically interprets your data and generates results in real time.

#### Your benefits

Dyostem enables you to equip your cellar with a veritable "classification by market" system for your harvest. At last you have the possibility to characterise and classify your grapes according to specific objective criteria.

#### What can Dyostem do for you ?

- Determine the aromatic potential and phenolic ripeness
- Monitor the evolution of yields over a given vintage
- Carry out real plot selections based on quality criteria
- Predict harvest date
