NEW Dyostem Grape Monitoring System

DESCRIPTION: The Dyostem grape maturity monitoring system helps create a more consistent wine profile year after year. It measures sugar loading of grapes over time, not Brix, and optimizes picking date based on the desired wine profile. Ideal for getting more consistent harvest results from multiple vineyard blocks of the same varietal.

DIFFERENCE: The Dyostem system is the only grape sugar-loading measurement system that compares the user's results with data collected worldwide of the same varietal, helping growers and winemakers make more informed harvesting decisions.
